Recruit AI

BY ANIESH DAS

The Hiring Bottleneck

- Hiring Is Broken for SMEs
  Problem:
  Sarah, a Talent Acquisition Manager at a 50-person startup, receives **300–800 resumes** per role — but has no dedicated HR team.
- **Pain Points:**
- Manual screening takes **20–40 hours** per role
- Important candidates get lost in inbox PDFs
- Scheduling takes endless back-and-forth emails
- Time-to-hire increases → business growth slows
- **Quote:**
  "One week into hiring, and I'm already drowning in resumes."

Market Opportunity

- **HR Tech Market**
- $32B global HR Tech market (2024)
- Growing to $76B by 2030
- AI-powered hiring is the **fastest growing segment (35% CAGR)**
- **SME Gap**
- Small–mid size companies represent:
- **65% of the overall hiring market**
- But lack affordable, simple AI screening tools
- **Why Now?**
- LLMs now understand unstructured text at near-human accuracy
- Agentic workflows allow automated decision-making + actions
- Companies must hire faster in competitive markets

The Solution (Recruit-AI)

- **Recruit-AI** is an agentic hiring assistant that:
- ✓ Parses JDs + Resumes
  ✓ Extracts skills, experience, red flags
  ✓ Generates a **Match Score (0–100)**
  ✓ Produces a **Recommended Action (Interview / Reject)**
  ✓ Summarizes strengths & gaps in plain English
  ✓ (Optional) Auto-schedules interviews
- **Value:**
  Reduce screening time by **80%**, accelerate hiring, and improve candidate quality.

Job Title
Senior Product Manager - AI Integrations
Strengths
Key qualifications that match the role
Exceeded the 5+ years PM experience requirement (6 years total).
Deep expertise in Machine Learning workflow implementation (core requirement met).
Proven ability to manage products through the full lifecycle from MVP to scale.
Strong grasp of required technical domains (CS background).
Skill Gaps
Areas where experience may be limited
Slight lack of explicit experience with international HR tech markets (preferred, not required).
Mentions proficiency in Python/R but no direct 'hands-on coding' history in last 3 years.

Tech Architecture

- **Frontend:**
- Built with Lovable / React
- Upload components for JD & Resume
- Displays analysis results
- **Backend (n8n Agent):**
- Receives files
- Converts PDFs to text
- Sends text to LLM for comparison
- Returns JSON (score + recommendations)
- **LLM Layer:**
- GPT-4 / Gemini for deep text reasoning
- **Integration:**
- REST API between frontend ↔ backend

Roadmap & 5-Year Financials

- **Phase 1:** Resume–JD analysis (MVP)
  Phase 2: Autoscheduling + email agent
  Phase 3: Multi-resume batch screening
  Phase 4: Full ATS integration
  Phase 5: SaaS platform with subscriptions
- **Financial Projection**
- Year 1: $50k ARR (early adopters)
  Year 3: $400k ARR (SMB segment expansion)
  Year 5: $2.5M ARR (ATS integrations + enterprise tools)

Success Metrics

- Time-to-Hire reduced by 40%
- Screening hours reduced by 80%
- Candidate quality score improved by 25%
- User NPS > 60
- Resume-to-interview ratio optimized
